

NaturalDrive CNG Vehicles

ARE you ready to experience the next generation of Compressed Natural Gas Vehicles?

Download our latest brochure

We have EPA-certified retrofits for GM's trucks and vans too! Our current EPA certificates and IRS tax credit notifications are located in the Downloads area.

NaturalDrive dedicated alternative fuel vehicle retrofits are certified by EPA and the right choice for your public, private or personal fleet. Unlike old-school conversions which require invasive activities such as the drilling and tapping of intake manifolds and extensive soldering and wiring, the NaturalDrive systems are simply plug and play. Replace the injectors, re-flash the computer, and you are done under-hood.

- Light weight carbon fiber fuel cylinders
- Factory Powertrain Control Module controls the natural gas fuel system, which is re-calibrated with proprietary software and calibrations

- OEM style retrofit with no underhood wiring modifications
- Simple Plug and Play installation
- OBDII compliant
- In-house technician training, vehicle operator orientation

Our light-duty dedicated CNG retrofits are all ILEV certified with EPA, providing single-occupant HOV lane access in many states. Our medium-duty GM/Chevy truck and van conversions earn \$8,000 in federal income tax credits. We provide the ultimate commuter and fleet vehicles for those who are looking for a real alternative to imported oil.
